## Resumen

El propósito principal del presente informe técnico basado en la metodología ABP - Aprendizaje Basado en Problemas, es presentar al Almacén Proveindustria Ltda., una propuesta de aprovisionamiento de inventario que permita mantener cantidades necesarias para la distribución al cliente y con ello se minimicen las fallas existentes y se dé paso a posibles mejoras dentro de su ejercicio como distribuidor de materiales de ferretería de tipo liviano y pesado.

Dentro del desarrollo del mismo se observa el problema, las alternativas de solución y el desarrollo de la mejor opción. Así mismo se relacionan los materiales que son suministrados actualmente por el Almacén y su relación de ventas, con base en estos datos se realiza el análisis requerido para el aprovisionamiento.

Es necesario resaltar que la necesidad nace de la respuesta negativa y el bajo porcentaje de satisfacción de los clientes en las evaluaciones de desempeño realizadas por cada orden de venta ejecutada, por lo anterior se realiza una explicación de la alternativa que genera más beneficio al proceso, indicando las ventajas y el desarrollo con base en los datos suministrados por la empresa.

**Palabras claves:** Inventario, aprovisionamiento, materiales, abastecimiento, parámetros de reposición

# Capítulo 1

## Introducción

De cara a una economía de creciente globalización y alta competencia direccionada al cliente, la logística y la cadena de suministro constituyen factores fundamentales para el éxito de una empresa, siendo el conjunto de actividades funcionales que giran en torno a generar valor en términos de tiempo y lugar. En este sentido, es la logística el proceso que permite controlar el flujo de los materiales desde el punto del aprovisionamiento hasta situar el producto en el sitio del consumidor, acorde a los requerimientos de este.

El desarrollo del presente trabajo se centrará en el Aprovisionamiento y sus tres aspectos fundamentales: Compas, Almacenamiento y Gestión de Inventarios. Teniendo en cuenta que la actividad económica de Almacén Proveindustria Ltda., es comercializar y distribuir materiales, el proceso se resume a la compra y venta de productos, en el almacenamiento la empresa determina donde guarda los productos hasta que el departamento de ventas los necesite; y en gestión de inventarios se determinará la cantidad de existencias que se han de mantener y el ritmo de pedidos para cubrir las necesidades de la empresa para la comercialización.

De esta manera, al contextualizar la situación se presenta una propuesta de aprovisionamiento que dé al almacén Proveindustria Ltda., las herramientas necesarias para la toma de decisiones mediante el adecuado conocimiento, documentación y control de sus actividades.

Al finalizar el desarrollo de este trabajo, se plantea un programa de socialización de la propuesta que incluye la entrega de un informe final al Almacén Proveindustria Ltda., exponiendo el resultado, quedando finalmente toda la información generada a su disposición para valoración y posible implementación.

# Capítulo 2

## Planteamiento del problema

### Descripción del Área Problemática

Almacén Proveindustria Ltda., empresa importadora y comercializadora de elementos y materiales relacionados con ferretería tipo liviano y pesado, busca posicionarse y destacarse competitivamente en este mercado; acorde a este objetivo, durante el año 2016 logró suscribir contratos y acuerdos con importantes clientes, que le han significado la recepción de una mayor cantidad de pedidos respecto del mismo período del año anterior como se puede evidenciar en la siguiente tabla:

Tabla 1 Comparativo del Incremento en Órdenes de Pedidos

**Comparativo del Incremento en Pedidos**

| **Período** (En Trimestres) | **No. Ordenes de Pedido** | **Período** (En Trimestres) | **No. Ordenes de Pedido** | **% Incremento por Período** |
|---|---|---|---|---|
| 2015-1 | 72 | 2016-1 | 88 | 22% |
| 2015-2 | 70 | 2016-2 | 85 | 21% |
| 2015-3 | 71 | 2016-3 | 83 | 17% |
| 2015-4 | 69 | 2016-4 | 79 | 14% |
| **Total** | **282** | | **335** | **19%** |

*Fuente*: Información recopilada en el estudio. Estrella y Martínez.

En este escenario, la empresa requiere evaluar su aprovisionamiento de inventario por parámetros de reposición, toda vez que se enfrenta a nuevas y más altas exigencias en el cumplimiento de tiempos de entrega, lo que demanda la optimización de sus recursos y procesos.

Es así como, a pesar de experimentar un notable crecimiento en ventas, asociado directamente al incremento en pedidos, las encuestas de satisfacción realizadas a los clientes durante los 3 primeros trimestres de 2016 señalan que el 50% de las órdenes de pedido no fueron atendidas en el plazo de entrega prometido, dejando así un alto nivel de insatisfacción en el servicio, que incide de manera negativa en la confiabilidad e imagen de la empresa ante clientes actuales y potenciales.

Por tal razón se procede a realizar el aprovisionamiento de inventarios por parámetro de reposición para determinar las cantidades mínimas de stock que debe tener la empresa para cubrir las necesidades de sus clientes. Dentro de la cadena de suministro de la empresa se puede observar que no se tiene control sobre los tiempos del proceso de aprovisionamiento, no se cuenta con stock de seguridad de inventario, se desconoce totalmente cuáles son los productos de mayor rotación entre los diferentes clientes, y existen falencias en el flujo de información en todo el proceso logístico, estos aspectos están dificultando que la empresa cumpla su gestión de la manera más eficaz y eficiente posible, impactando la satisfacción de los requerimientos de los clientes.

## Formulación de la pregunta Problema

Con base en lo anterior se formula la siguiente pregunta: ¿Cuál es la alternativa de Aprovisionamiento de inventario más favorable, que permita suplir los requerimientos de los clientes del Almacén Proveindustria Ltda.?

## Delimitación de la Investigación

De espacio: Esta investigación se desarrolló en las instalaciones del Almacén Proveindustria Ltda., ubicadas en la Carrera 25ª No. 12 – 28 en la Ciudad de Bucaramanga departamento de Santander.

De tiempo: La investigación tuvo una duración de seis (6) meses, desde el mes de julio hasta el mes de diciembre del año 2016.

Población: Registro de todos los movimientos realizados en las referencias que se utilizan en el almacén de la empresa. La muestra utilizada en este ABP son las 280 referencias existentes en el almacén. La investigación afectó de manera directa al 100% de la planta de personal del Almacén Proveindustria Ltda., conformada por 14 colaboradores sectorizados de la siguiente manera:

Figura 1 Sectorización por Cargos.

*Fuente*: Almacén Proveindustria Ltda.

# Capítulo 3

# Objetivos

## Objetivo General

Plantear una propuesta de mejora para el aprovisionamiento y gestión de inventario para el Almacén Proveindustria Ltda., ubicada en la ciudad de Bucaramanga, que permita elevar el nivel de satisfacción del cliente.

## Objetivos específicos

- Realizar un diagnóstico sobre el proceso actual de abastecimiento del Almacén Proveindustria Ltda., para determinar oportunidades de mejora en los mismos.
- Analizar los patrones históricos de la demanda de materiales para identificar aquellos productos de mayor rotación y la factibilidad para establecer los parámetros de un stock de seguridad.
- Plantear y seleccionar una propuesta estructurada de mejoramiento para el proceso de aprovisionamiento de inventario por parámetros de reposición.
- Socializar la propuesta de aprovisionamiento de inventario en el Almacén Proveindustria Ltda., para generar conciencia sobre la importancia de su implementación en el cumplimiento de objetivos.

# Capítulo 4

# Meta Propuesta en la Investigación

## Meta Propuesta

Con el desarrollo del presente informe técnico basado en la metodología ABP se pretende diseñar una propuesta de aprovisionamiento de inventarios que represente una solución al incumplimiento en los plazos de entrega de los pedidos y así mismo elevar el nivel de satisfacción de los clientes a un 90% en el cumplimiento oportuno de las entregas de materiales para septiembre de 2017.

## Causas que Impiden Lograr la Meta

Partiendo del problema enunciado, se identifican las siguientes limitaciones para alcanzar la meta:

- Almacén Proveindustria Ltda., tiene un catálogo de 280 referencias de diferentes materiales, pero no cuenta con stock suficiente para ninguno de estos.
- Asociado a lo anterior, la empresa no tiene identificadas las referencias de materiales de mayor rotación entre sus clientes, por lo que no cuenta con información suficiente e idónea para desarrollar planes cuantitativos de necesidad de materiales.
- Los elementos de control y seguimiento son insuficientes para asegurar que el proceso de aprovisionamiento se ejecute de la manera más eficiente.
- Resistencia por parte de algunos de los colaboradores de la empresa a cambios y posible restructuración de procesos.

# Capítulo 5

## Método de Estudio

El presente documento se realiza de acuerdo con la metodología de Aprendizaje Basado en Problemas (ABP), la cual permite buscar el aprendizaje necesario para la resolución del problema planteado. El ABP es un método de enseñanza en el que se adquieren conocimientos, habilidades y actitudes por medio de situaciones reales presentando inicialmente el problema, realizando el análisis de los datos recopilados, posteriormente se hace el planteamiento de alternativas de solución a fin de recomendar el procedimiento que permita resolver de manera definitiva el problema observado.

Para el diseño de la propuesta de aprovisionamiento de inventario de Almacén Proveindustria Ltda., ubicada en la ciudad de Bucaramanga, se cumplieron las siguientes etapas:

Etapa 1 - Recolección de información: Con el propósito de tener un conocimiento más profundo de la empresa, se procedió con la recolección de información utilizando el método de consulta de las bases de datos; lo anterior permitió obtener una descripción detallada de la cantidad de material suministrado a los clientes. Así mismo, se adelantó la recopilación de material bibliográfico que dio fundamento teórico y delimitó el tema principal de estudio, que corresponde a aprovisionamiento de inventario.

Etapa 2 - Análisis de información y diagnóstico: Una vez reconocidas a detalle las actividades que integran el proceso de la empresa, se realizó un diagnóstico sobre cada una de estas identificando puntos con potencial de mejora y/o cambio, posteriormente se

continuó con la formulación de alternativas que permitan el estudio y la identificación de la más viable.

Etapa 3 - Diseño de propuesta de aprovisionamiento: Con la información obtenida en la etapa previa, se seleccionó la solución que brinda mayor beneficio y se ajusta mejor a las metas de Almacén Proveindustria Ltda., Con esto se elaboró la propuesta de aprovisionamiento de inventario por parámetros de reposición y la elevación de la satisfacción del cliente.

Etapa 4 - Informe final y socialización: Para finalizar el desarrollo de este trabajo, se realiza el informe final de las actividades que se llevaron a cabo seguida de una socialización a la empresa, haciendo entrega de toda la información generada, explicando la importancia del aprovisionamiento de material.

# Capítulo 6

# Marco Referencial

## Marco Teórico

Dado que la mira central de este trabajo de investigación estará puesta en la importancia de los Procesos Logísticos, será necesario plantear algunos parámetros que sirvan de ejes conceptuales para soportar la lectura interpretativa de dichos conceptos.

Para empezar, es indispensable conocer el concepto Logística, del mismo modo en que es definido por Douglas M. Lambert, M. Cooper, J. D. Pagh., en Supply Chain Management: Implementation Issues and Research Opportunities, The International Journal of Logistics Management. Vol.9, nº 2, páginas 1-19, 1998. “La parte de la gestión de la cadena de suministro (Supply Chain Management, SCM) que planifica, implementa y controla el flujo eficiente y efectivo de materiales y el almacenamiento de productos, así como la información asociada desde el punto de origen hasta el de consumo, con el objeto de satisfacer las necesidades de los clientes”.

En forma aplicada podemos decir que la logística se encarga de dar un buen manejo a los diferentes factores como el aprovisionamiento, almacenamiento, inventarios tanto de materias primas como de productos terminados, la producción y finalmente la distribución con el fin de llegar al consumidor final y obtener mayores beneficios derivados de toda una cadena logística.

Dentro de los proceso de administración de la logística, se observa que la logística gestiona la organización o empresa a partir de los flujos de material y de información que va desde los proveedores hasta los clientes, y que el flujo de material inicia desde los

proveedores, pasa por el proceso de producción o fabricación y es distribuido hasta llegar al cliente.

De tal manera que se hace importante comprender “ la cadena de abastecimiento como un proceso que busca alcanzar una visión clara del suministro de materias primas, componentes o productos semi-elaborados que conlleva a hacer los pedidos a los proveedores, el transporte, almacenaje y suministro de fábrica basado en un trabajo conjunto de proveedores, fabricantes, depósito y negocios minoristas para que la mercancía se produzca y distribuya en las cantidades correctas, lugares adecuados, en tiempo justo con objeto de minimizar los costos que no agregan valor y mejorar la calidad y el cumplimiento” (Franco, 2008, pág. 17)

Si se hace un acercamiento al eje central de este documento se incorpora el concepto gestión o logística del aprovisionamiento destacando que una efectiva gestión de aprovisionamiento permitirá reducir los costos y que el funcionamiento del sistema logístico sea efectivo, pues permite mejorar el flujo continuo de materiales y así mejorar la calidad, mantener unas normas de calidad adecuadas, adquirir productos de acuerdo a las especificaciones o necesidades de la Empresa, gestionar de forma efectiva los inventarios de mercancía o materiales, encontrar y mantener proveedores confiables y competentes, mantener relaciones gana-gana con los proveedores, apoyar la consecución de los objetivos de la Organización y minimizar el costo total de la gestión de aprovisionamiento.

"Puede decirse que APROVISIONAR es una función destinada a poner a disposición de la empresa todos los productos, bienes y servicios del exterior que son

necesarios para su funcionamiento" Pau, J. y De Navascues, R. "Manual de Logística integral" Editorial Díaz de Santos, Madrid, 1998.

Lograr que una organización tenga un adecuado manejo de su inventario es una ardua tarea que implica no solamente esfuerzos sino una "capacidad de predicción con el fin de planear y establecer el cronograma de producción o fluctuaciones de la demanda, que permita generar una reserva de inventario prediciendo inestabilidad en el suministro y asegurando la continuidad de la producción, ya que, el inventario protege a la organización de factores externos como retrasos por parte de los proveedores, escasez de materias primas, problemas en la vías o canales de acceso y malas relaciones comerciales; además otra utilidad de manejar inventarios es disminuir costes de pedido, pues cuando se compra por cantidades mayores de un artículo con menor frecuencia los costos del pedido son menores que si se compra en pequeñas cantidades una y otra vez" (Muller, 2005, pág. 35).

Teniendo en cuenta lo anterior, se puede concluir que la gestión de abastecimiento abarca las compras, la gestión de proveedores, almacenamiento y gestión de inventarios, todo esto con el fin de contar y mantener los materiales, materias primas, productos correctos, en las cantidades correctas, en el tiempo correcto y con el mínimo costo. Hoy día, es necesario que se integre la función compleja de aprovisionamiento al sistema logístico de la empresa.

## Marco Legal

Dentro del entorno legal en el que se desarrolla la actividad comercial de Almacén Proveindustria Ltda., hay que tener en cuenta la reglamentación técnica que la

rige por lo tanto es preciso resaltar que el desarrollo del presente ABP contará igualmente con un compendio de normas aplicables, a continuación se hará referencia a las normas jurídicas que incumben al problema formulado:

- Código de comercio (Decreto 410 de 1971): abarca las disposiciones para los comerciantes y las operaciones mercantiles.
- Estatuto del consumidor (Ley 1480 de 2011): contempla los principios generales para la protección, promoción, garantía del consumidor.
- Decreto 299 de 199: regula la aplicación de derechos "antidumping" y de derechos compensatorios, aplicables a las importaciones de productos.
- Decreto 624 de 1989: Estatuto tributario.
- Decreto 925 de 2013: estable disposiciones relacionadas con las solicitudes de registro y licencia de importación.
- Decreto 1510 de 2013: reglamenta el sistema de compras y contratación pública. Incluye requisitos a tener en cuenta como contratista u oferente en procesos de contratación con entidades estales, así como disposiciones sobre los parámetros bajos los que se deben surtir los procesos de contratación.
- Decreto 2685 de 1999 y Resolución 4240 de 2000: Estatuto aduanero y reglamentación.
- NTC 5520-1 – Calidad de servicio para pequeño comercio: establece los requisitos generales que se deben tener en cuenta a fin de satisfacer las expectativa de los clientes, tales como cortesía, credibilidad, capacidad de respuesta, fiabilidad, comunicación,

seguridad, accesibilidad, instalaciones, equipos, mobiliario, envases, embalajes, documentos de compra, productos, entre otros.

• ISO 7000 – Marcado o rotulado: contiene lineamientos para el marcado o identificación el embarque, destino, número total de unidades enviadas y códigos de los documentos para fácil ubicación.

• ISO 3394 - Paquetes completos, llenos de transporte y unidades de carga - Dimensiones de la rígida paquetes rectangulares: hace referencia a las dimensiones de las cajas, las estibas o plataformas y las cargas paletizadas.

• Reglamento de la Organización Internacional del Trabajo (OIT): estipula, entre otros, que por razones ergonómicas ninguna carga que requiera manipulación por fuerza humana podrá pesar más de 25 Kg.

## Marco Conceptual

El marco conceptual del presente trabajo define los conceptos claves que deben estar claros para la comprensión del tema:

- Aprovisionamiento: El abastecimiento o aprovisionamiento es la función logística mediante la cual se provee a una empresa de todo el material necesario para su funcionamiento. Su concepto es sinónimo de provisión o suministro. Las actividades incluidas dentro de este proceso son las siguientes:

(a) Cálculo de necesidades: Es una actividad propia del planeamiento logístico. Las necesidades de abastecimiento involucran todo aquello que se requiere para el funcionamiento de la empresa, en cantidades específicas para un determinado período de tiempo, para una fecha señalada, o para completar un determinado proyecto.

El cálculo de las necesidades se materializa con los pedidos o la requisición. Las necesidades de abastecimiento para una empresa determinada pueden ser por consumo, reemplazo, reserva o seguridad, necesidades iníciales y necesidades para proyecto. Dentro de esta actividad se debe considerar al factor tiempo.

(b) Compra o adquisición: Esta actividad tiene por objetivo realizar las adquisiciones de materiales en las cantidades necesarias y económicas en la calidad adecuada al uso al que se va a destinar, en el momento oportuno y al precio total más conveniente.

Los principales objetivos específicos de esta actividad son:

- Mantener la continuidad del abastecimiento.
- Pagar precios justos, pero razonablemente bajos por la calidad adecuada.
- Mantener existencias económicas compatibles con la seguridad y sin prejuicios para la empresa;- Evitar deterioros, duplicidades, desperdicios, etc., buscando calidad adecuada.
- Buscar fuentes de suministros, alternativas y localizar nuevos productos y materiales.
- Mantener costos bajos en el departamento, sin desmejorar la actuación;
- Estudiar e investigar nuevos procedimientos continuamente; preocuparse por la permanente capacitación del personal; y, mantener informado al gerente de logística o gerente general acerca de la marcha del departamento.

(c) Obtención: La obtención empieza con el pedido y tiene por finalidad contribuir a la continuidad de las actividades, evitando demoras y paralizaciones, verificando la exactitud y calidad de lo que se recibe.

(d) Almacenamiento: Este implica la ubicación o disposición, así como la custodia de todos los artículos del almacén, que es la actividad de guardar artículos o materiales desde que se producen o reciben hasta que se necesitan o entregan. Los principales aspectos de esta actividad son:

- Control de la exactitud de sus existencias.
- Mantenimiento de la seguridad.
- Conservación de los materiales.
- Reposición oportuna.

(e) Despacho o distribución: Consiste en atender los requerimientos del usuario, encargándose de la distribución o entrega de la mercadería solicitada.

Para que los requerimientos de los usuarios sean atendidos con prontitud, es necesario contar con el embalaje o empaque para asegurarnos que las cantidades y calidades de los artículos o materiales sean correctas. Es igualmente importante en esta función asegurar el control de la exactitud de los artículos que se despachan, así como la rapidez de su ejecución para cumplir con los plazos solicitados.

(f) Control de stocks: Como objetivo de esta actividad debemos plantear el asegurar una cantidad exacta en abastecimiento en el lugar y tiempo oportuno, sin sobrepasar la capacidad de instalación.

Con un control preciso y exacto se garantiza un control efectivo de todos los artículos de abastecimiento.

- (g) Utilización de desperdicios: Esto con el fin de tomar las medidas más ventajosas para la empresa.

- Inventarios: Existencia o cantidad de productos físicos que se conservan en un lugar y momento determinado para facilitar la producción o satisfacer las demandas del consumidor y que puede incluir materia prima, producto en proceso y producto terminado.
- Almacén: Es el lugar físico en el que se desarrolla una completa gestión de los productos que contiene. La misión básica de un almacén se configura y desarrolla en las funciones de recepción de artículos e identificación de los mismos, almacenamiento y entrega de productos.
- Proveedor: Es una persona o entidad de diverso orden que abastece o suministra a otras persona o empresas de lo necesario o conveniente para un fin determinado. El proveedor debe cumplir con los plazos y las condiciones de entrega de sus productos o servicios para evitar conflictos con la empresa a la que abastece.
- Indicadores: Se denomina desempeño al grado de desenvoltura que una entidad cualquiera tiene con respecto a un fin esperado.
- Desempeño: Se denomina desempeño al grado de desenvoltura que una entidad cualquiera tiene con respecto a un fin esperado.
- Estrategias: Técnica y conjunto de actividades destinadas a conseguir un objetivo.
- Almacenamiento: Se definen en aquellos lugares donde se depositan materias primas, productos en proceso y terminados, se manejan a través de una política de inventarios, esta función se controla a través del control de los mismos. Es importante tener una estrategia de almacenamiento ya que esta permite definir de manera coordinada el sistema de gestión del almacén y modelo al almacenar. Este permite determinar el

espacio y las características que este debe obtener como por ejemplo pasillos, estanterías, zonas de alistamiento, entre otros.

- Competitividad: Tendencia a participar en cualquier rivalidad para conseguir un fin.
- Cadena de Suministro: Llamado también “Suply Chain Managent” su objetivo fundamental es optimizar la gestión de flujos físicos, administrativos y de información que surgen a lo largo de la cadena logística desde el proveedor hasta el cliente.

Este se refiere a un proceso de funcionamiento cuyo fin es asegurar la gestión y la sincronización del conjunto de procesos como la planificación de compras, producción, distribución de los productos y servicio al cliente. El «SupplyChain» contiene todas las actividades asociadas con los flujos y la transformación de los productos, desde las materias primeras hasta el producto terminado entregado al cliente final, así como los flujos administrativos y de informaciones asociados, la Cadena de suministro, se define entonces como la integración de estas actividades que representa una ventaja competitiva para la empresa colocando en el centro del sistema la satisfacción de las necesidades cliente”.

- Stocks: Cantidad de productos, materias primas, herramientas, etc., que es necesario tener almacenadas para compensar la diferencia entre el flujo del consumo y el de la producción. Constituye una inversión que permite asegurar en condiciones óptimas la continuidad de las ventas, las fabricaciones y la explotación normal de la empresa, en otras palabras es el número de productos o artículos que hay en un almacén con cierta localización.

- Gestión de Inventarios: Se refiere a todo lo relativo con el control y manejo de existencia de determinados bienes en el cual se aplican métodos y estrategias que pueden hacer rentable y productivo la tenencia de estos; también permiten evaluar los movimientos o procedimientos de dichos productos. En la gestión de inventarios se implementan tres actividades básicas que son: la determinación de las existencias, el análisis del inventario, y el control de producción, cuando estas se están realizando de manera eficiente se puede afirmar que hay una buena gestión. La importancia de una gestión de inventarios radica en tener la cantidad adecuada de stock que permita responder ante posibles imprevistos tanto de la demanda como de la oferta, para proteger las actividades de la empresa, teniendo en cuenta que las organizaciones competitivas trabajan cada vez con stocks más bajos y niveles de servicio más altos.
- Logística: Se puede definir como el grupo de métodos que se necesitan para realizar la organización de una compañía, su objetivo fundamental es buscar optimizar los costos para poner en el lugar correcto y en el momento correcto un bien. Este concepto fue de origen militar y se aplica en todas las fases de distribución de los productos, incluyendo en los eslabones de la cadena de distribución, esta se encarga toda la parte organizativa y estructural del producto o servicio y su finalidad es disminuir niveles de inventario y optimizar el funcionamiento de toda la cadena de distribución.

# Capítulo 7

## Situación Actual de la Compañía

### Almacén Proveindustria Ltda.

Almacén Proveindustria Ltda., es una empresa con más de 30 años de experiencia en el ejercicio como importadora y comercializadora de elementos y materiales relacionados con ferretería tipo liviano y pesado, cuenta con un catálogo de productos de 280 referencias de las cuales se destacan las siguientes por su importancia:

Tabla 2 Principales referencias de materiales suministrados

| Principales Referencias | | |
|---|---|---|
|  Válvula de Compuerta de Acero Forjado |  Medidor de agua tipo pesado |  Válvula de Retencion Tipo Bola en Acero Forjado |
|  Válvula de Bola para Gas |  Accesorios Sanitarios en Acero Inoxidable |  Válvula de Globo en Acero Forjado |

Separador de Condensado Vertical

Válvula de Retencion Tipo Piston en Acero Forjado

Válvula de Globo en Hierro Fundido

Válvula Tipo Bola de 3 Piezas

Trampas Termodinamicas

Bobinas De Alto Rendimiento Tipo BE

Medidor de agua volumetrico

separador de humedad de instalación vertical

Medidor de agua cromado

Válvula de Globo de Acero Forjado

Pistola Para Vapor

Válvula Reductora Auto Reguladora

Válvula de Bola Trunnion API 6D Paso Full

Arrancador Suave Para Motor Tipo MCI

Termostato Tipo RT

## Descripción General de los Procesos del Ciclo de Aprovisionamiento

Se considera el ciclo de aprovisionamiento como un proceso en el que se involucran diferentes elementos de la logística con el objeto de suministrar a alguien, aquellos elementos que necesita para subsistir o funcionar, podemos establecer la importancia que tiene una buena gestión de este ciclo. Se pueden apreciar los elementos mencionados anteriormente en la siguiente gráfica:

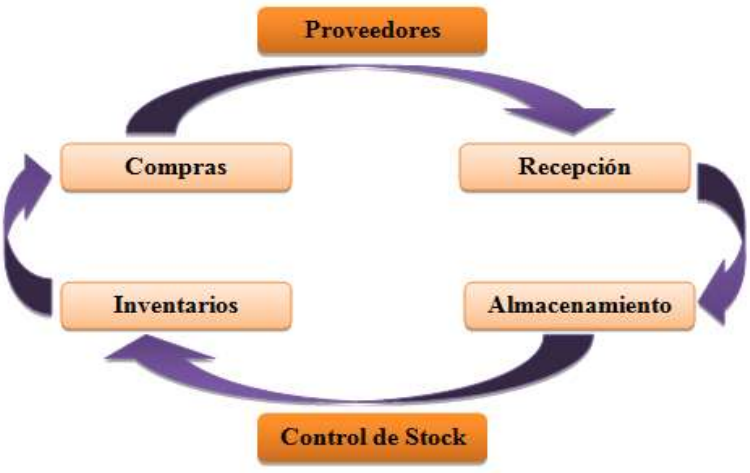

Figura 2 Logística de Aprovisionamiento.

*Fuente*: Estrella y Martínez. (2017)

En la logística de aprovisionamiento del Almacén Proveindustria Ltda., hay tres aspectos fundamentales que se deben considerar:

- Selección de Proveedores: Los proveedores con que cuenta actualmente Almacén Proveindustria Ltda., son el resultado de una relación comercial construida bajo unos criterios de cumplimiento, calidad, precio, y plazo de entrega, dentro de la investigación se pudo establecer que los proveedores no afectan el ciclo, pues aunque los tiempos de entrega oscilan entre los 10 y los 25 días, estos tiempo corresponden al proceso normal de importación a los que los materiales son sometidos.
- Almacenes: Almacén Proveindustria Ltda., cuenta con dos bodegas de almacenamiento lo suficientemente amplias para almacenar un Stock que permita albergar materiales para satisfacer la demanda de 1,5 años (*Cálculo estimado por los encargados de Ventas y Almacenamientos según su experiencia*). Sin embargo estas bodegas no reciben el uso adecuado puesto que Almacén Proveindustria Ltda., dentro de sus políticas actuales no es partidario de manejar Stock.
- Gestión de inventarios: Almacén Proveindustria Ltda., no cuenta con un software que le permite mantener controlado el inventario y llevar un control de existencias, así mismo no se han preocupado por determinar el ritmo de pedidos que les permita anticiparse y determinar el comportamiento del mercado, además por tratarse de materiales especializados y de alto costo, las directivas han establecido que 30 de sus referencias serán adquiridas sobre pedido de sus clientes sin ser esta una condición que el cliente haya aceptado previamente, situación que genera que solamente el 50% de los

pedidos hayan sido entregados a tiempo durante el año 2016 y por ende la satisfacción del cliente se ha visto considerablemente afectada.

**Diagrama de Bloques del Ciclo de Aprovisionamiento Actual**

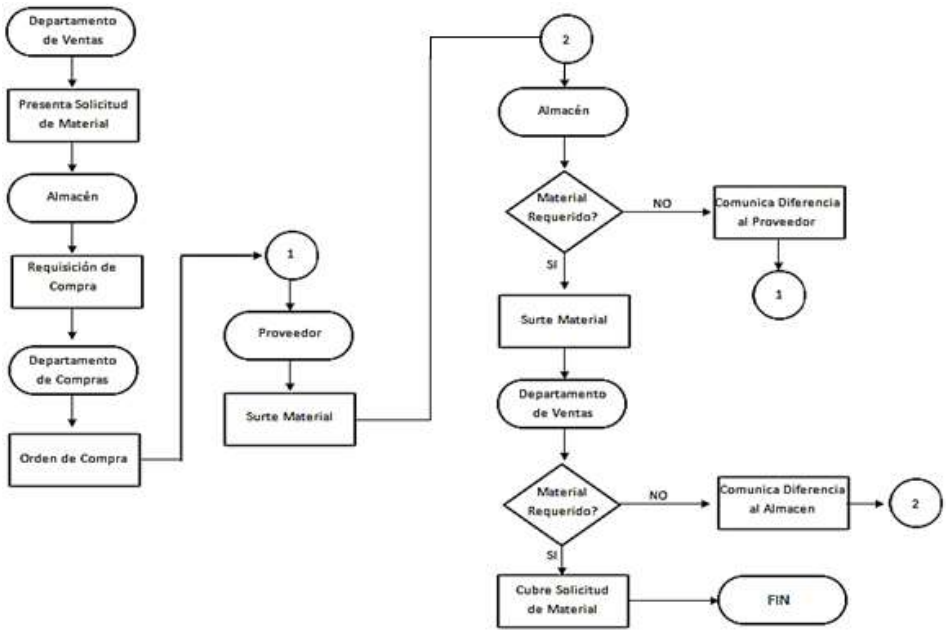

Figura 3 Diagrama de Bloques del ciclo de aprovisionamiento actual

*Fuente: Estrella y Martínez. (2017)*

## Capítulo 8

## Metodología Propuesta

### Definición del Tipo de Investigación

El desarrollo del presente trabajo se compone de dos tipos de investigación, de tipo descriptivo, en donde se lleva a cabo la observación y descripción del comportamiento del proceso logístico del Almacén Proveindustria Ltda., fase en la que

no se pretende influir sobre sus procesos de ninguna manera, sino obtener una visión general de dichos proceso y evaluar sus hábitos, así mismo se puede identificar como de carácter exploratorio pues el objeto de estudio es completamente desconocido y mediante este tipo de investigación se pretende lograr una aproximación a los nuevos fenómenos y así poder dar respuestas a preguntas básicas como ¿Para qué? (funcionalidad), ¿Cuál es el problema? (identificación y clasificación del objeto de estudio), ¿Qué se podría investigar? (delimitación del estudio) para facilitar una mayor penetración y comprensión del problema que enfrentamos como investigadores.

## Determinación de la Población y la Muestra

Se considera la Población, según Bavaresco Aura (2006) como: "…el conjunto de todos los individuos, objetos, procesos o sucesos homogéneos que constituyen el objeto de interés. La población se relaciona directamente con el campo de estudio." Es por esto que la población a estudiar está conformada por todas las referencias que existen en el Almacén Proveindustria Ltda., ubicado en la Ciudad de Bucaramanga, este almacén cuenta con una planta de personal de catorce (14) colaboradores, distribuidos en tres (3) directivos y once (11) operativos. **(Ver Figura 1)**, adicionalmente, cuenta con un catálogo de 280 referencias entre nacionales e importadas sectorizadas como se muestra en la siguiente figura:

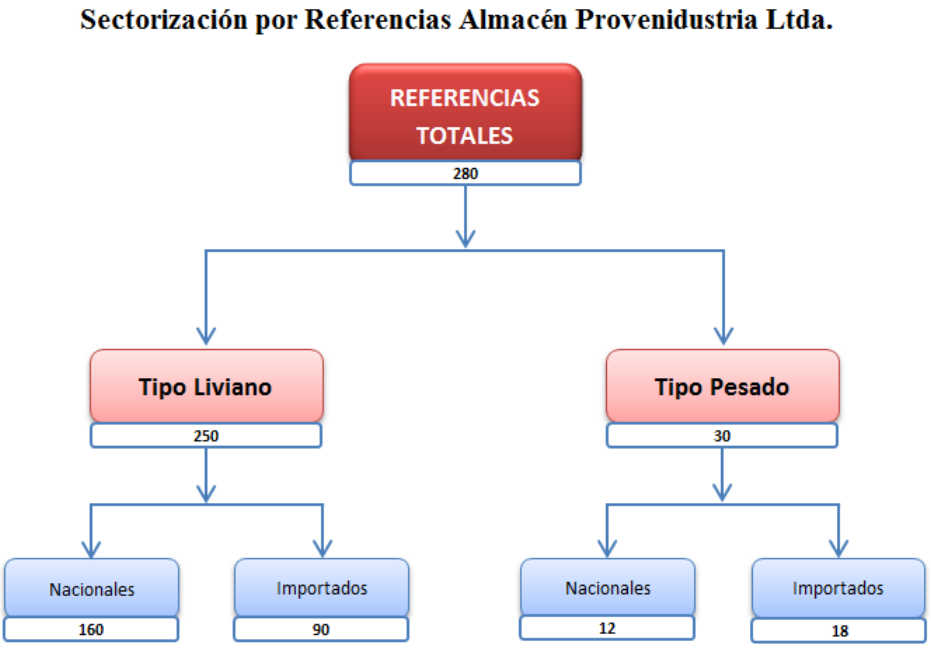

Figura 4 Sectorización por Referencias.

Fuente: Estrella y Martínez. (2017)

Para efectos de estudio y análisis de las variables, Bavaresco Aura (2006) considera que se puede establecer dos tipos de estudio por muestreo: uno el descriptivo "*…sólo se trabaja con una parte de la población*." y el muestreo analítico, donde *"...se busca relacionar las características con sus causas*." pudiéndose hacer estudios combinados. Por tratarse de un problema de investigación tan específico donde se resalta que la necesidad nace de la respuesta negativa y el bajo porcentaje de satisfacción de los clientes en las evaluaciones de desempeño realizadas por cada orden de compra ejecutada, para efectos del presente ABP, la muestra a utilizar son el 100% de las referencias que maneja la empresa objeto de estudio.

La unidad de análisis y observación serán los departamentos de Compras, Almacenamiento e Inventarios observando la metodología empleada por los directivos y empleados y, la estructura física con que cuentan para el proceso de aprovisionamiento.

## Recopilación de la Información

Gracias a la cooperación del  Administrador General del almacén quien permitió no solamente realizar visitas constantes al establecimiento para que por medio de la observación directa se pueda analizar a fondo el fenómeno de estudio, sino que además proporcionó información pertinente para el desarrollo de la investigación durante los 6 meses de estudio.

# Capítulo 9

# Propuesta de Aprovisionamiento

## Evaluación de Alternativas

La evaluación de alternativas se plantea mediante el método de decisión multicriterio, el cual es utilizado cuando el número de alternativas viables es finito, cuando se pueden aislar un grupo de atributos que se puedan evaluar en las alternativas por igual y cuando estos criterios básicos puedan proveer una herramienta de toma de decisión adecuada y rápida.

## Descripción de Alternativas

Teniendo en cuenta lo anterior, se plantean las siguientes alternativas:

Tabla 3 Matriz de descripción de alternativas

| **Alternativas a Considerar** | |
|---|---|
| **No.** | **Descripción** |
| 1 | *Pronostico del sector*:<br>Los principales clientes de la empresa se encuentran en el sector de hidrocarburos, el comportamiento del sector influye en la solicitud de material. |
| 2 | *Comportamiento histórico*:<br>La empresa puede aprovisionar con base en las cantidades de material compradas en un periodo determinado. |
| 3 | *Compras masivas obteniendo disminución en precios*:<br>La empresa procedería a realizar compras de material de forma masiva para obtener descuentos en precios de sus distribuidores, así mismo tendría material en stock para abastecer a sus clientes. |

*Fuente*: Información recopilada en el estudio. Estrella y Martínez. (2017)

## Revisión de Alternativas

### Alternativa 1

Con la alternativa 1 se planea pronosticar los pedidos que serán realizados a la empresa a fin de establecer parámetros de reposición. Teniendo en cuenta que los principales clientes se encuentran en el sector de hidrocarburos, se solicita información de los proyectos que serán ejecutados para tener una demanda no planeada del material.

Se realiza un sondeo telefónico con el propósito de recolectar información, sin embargo el resultado no es positivo, las empresas clientes no suministran información argumentando que el sector es variable y los proyectos pueden no ejecutarse.

### Alternativa 2

La empresa puede aprovisionar con base en las cantidades de materiales vendidos en un periodo determinado. El material que será comprado en su inventario corresponderá al promedio de ventas realizadas del sector de hidrocarburos, lo que resulta una alternativa razonable, teniendo en cuenta que la empresa tiene con su cliente más significativo un contrato de anticipación de demanda planeada, que si bien no determina las cantidades exactas a comprar en el año, le permite aprovisionar por medio del histórico de compras.

### Alternativa 3

Compras masivas obteniendo disminución en precios: Esta alternativa resulta ser riesgosa debido a que la compra de materiales en cantidades grandes pueden generar

pérdidas a largo plazo, si bien los proveedores dan descuentos, este material puede quedarse en almacén y no ser vendido, la mayoría son materiales especiales que solo se usan en el sector de hidrocarburos limitando su venta a otro tipo de clientes.

Se realiza un estudio de la mejor alternativa cuyos resultados se presentan en la siguiente tabla:

Tabla 4 Matriz de aspectos mínimos requeridos por Alternativa (AMR)

| **Aspectos Mínimos Requeridos** | | | |
|---|---|---|---|
| | **Alternativas a Considerar** | | |
| **Análisis y cumplimiento** | **1** | **2** | **3** |
| Con la alternativa podemos dar cumplimiento al alcance de la propuesta. | SI | SI | D |
| Con la alternativa se cumplirá con las expectativas y necesidades de la empresa. | D | SI | NO |
| Con la alternativa se puede alcanzar el objetivo en tiempo razonable. | SI | SI | SI |
| La alternativa genera un costo razonable | D | SI | D |
| TOTAL SI | 2 | 4 | 1 |

Conversión: (SI) Positivo, (NO) Negativas, (D) Dudosa

*Fuente*: Datos alcanzados en el estudio. Estrella y Martínez. (2017)

Las alternativas que tienen respuestas NEGATIVAS (NO) o DUDOSA (D) no son viables.

## Selección de la Mejor Alternativa

Teniendo en cuenta los resultados de la matriz de la anterior revisión de alternativas, se establece como la mejor alternativa la opción No. 2: “La empresa puede

aprovisionar con base en las cantidades de material vendido en un periodo determinado", por lo anterior se hace necesario la revisión de los datos históricos de los bienes despachados es decir análisis de la demanda en años anteriores, este proceso ayudará a pronosticar las compras anuales de la empresa, el momento adecuado para realizar la compra y el precio estimado, así mismo a determinar el tipo de compra y tiempo requerido para realizar el proceso.

Esta alternativa podrá funcionar adecuadamente si el proceso no es realizado como emergencia del día, ya que puede implicar la insatisfacción de los clientes; por otro lado la planificación de estas compras evitará desgaste administrativo reduciendo trámites y papeleo al reducir el número de veces que se realiza el proceso con el mismo material.

## Aplicación de la Alternativa Seleccionada

Teniendo en cuenta la alternativa de comportamiento de históricos, se procede a realizar el análisis que permite determinar las cantidades de compra para la vigencia 2017 de las doscientos ochenta (280) referencias establecidas en la investigación.

Con base en el Anexo No. 1 que corresponde a la relación de ventas de la vigencia 2015 y 2016, se realiza el análisis de stock como parte de la observación del comportamiento que presentan los stocks de materiales de Almacén Proveindustria Ltda y tener un stock de anticipación que satisfaga las necesidades de aprovisionamiento de material.

Tabla 5 Notación de las formulas

| Sigla | Descripción | Formula/ |
|---|---|---|
| Dd | Demanda o consumo Dario | |
| n | Días de actividad del periodo | 365 |
| d | Plazo de entrega en días | |
| dr | Plazo de entrega del proveedor con días de retraso | |
| SM | Stock Maximo | $SM = Dd(n + d) + SS$ |
| SS | Stock de seguridad | $SS = Dd * (dr - d)$ |
| PP | Punto de pedido | $PP = Dd * d + SS$ |

*Fuente*: Datos alcanzados en el estudio. Estrella y Martínez. (2017)

Con base en la revisión de la tabla anterior, se generaron los parámetros de reposición de la siguiente manera:

Se toma como ejemplo el código 3301:

Ventas 2015 = ***125*** Ventas 2016 = ***38*** Promedio Ventas = (125+38)/2 = ***82***

Dd = 82/365 = ***0,223*** SS = 0,223(60-30) = ***7***

SM = 0,223(365+30)+7 = ***95*** PP = 0.223*30+7 = ***13***

De esa manera se realizó los cálculos de cada una de las referencias. Ver tabla No. 6

Tabla 6 Aplicación de las fórmulas

| Stock Code | Ventas 2015 | Ventas 2016 | Suma Ventas | Promedio Ventas | Dd | d | dr | SM | SS | PP |
|---|---|---|---|---|---|---|---|---|---|---|
| 3301 | 125 | 38 | 163 | 82 | 0,223 | 30 | 60 | 95 | 7 | 13 |

Representación gráfica de la anterior tabla

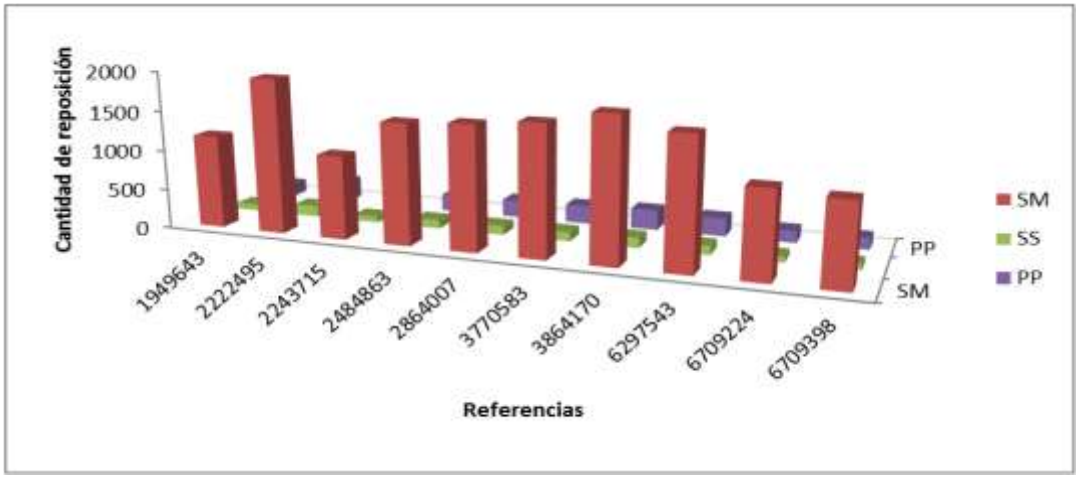

Gráfico 1 Histograma de referencias con mayor cantidad en reposición

Fuente: Datos alcanzados en el estudio. Estefanía y Martínez. (2017)

La reposición es una de las principales tareas dentro de la gestión de inventarios, puesto que significa que un producto se agota ya que los consumidores han comprado todo el stock disponible, es por esta razón que en la tabla anterior se realizó una extracción de las 10 referencias con mayor cantidad en reposición en Almacén Proveindustria Ltda., aunque no hay un periodo concreto a la hora de realizar un pedido, cuando hay un

periodo de alta demanda, los pedidos se harán con mayor frecuencia que cuando la demanda es baja, en todo caso, es el momento en que debemos realizar un pedido para evitar roturas de stock y problemas en el suministro a nuestros clientes. Al punto de pedido está unido el número de unidades que necesitamos para cubrir el stock de seguridad establecido y las ventas previstas durante el plazo de entrega del proveedor. De esta forma, si el volumen de ventas real coincide con el previsto durante el plazo de entrega, en el momento de la recepción del producto el nivel de stock debe coincidir con el stock de seguridad.

Tabla 8 Referencias que más solicitan según el histórico analizado

| Referencias con mayor movimiento | Punto de pedido (PP) | Punto de pedido relativo | Punto de pedido acumulado | Punto de pedido relativo Acumulado |
|---|---|---|---|---|
| 1949643 | 165 | 8,11% | 165 | 8,11% |
| 2222495 | 275 | 13,51% | 440 | 21,62% |
| 2243715 | 148 | 7,27% | 588 | 28,89% |
| 2484863 | 214 | 10,52% | 802 | 39,41% |

Gráfico 2 Histograma de referencias con mayor cantidad a pedir según el histórico.

*Fuente*: Datos alcanzados en el estudio. Estrella y Martínez. (2017)

De la gráfica anterior en donde la frecuencia relativa se expresa como porcentaje se puede interpretar que el 50% de los datos analizados está conformado por tres referencias: 1949643, 6709398 y 6709224 con 17%, 17% y 16% respectivamente, y a las que se les recomienda realizar seguimiento y cumplir con el stock sugerido para que no presente a futuro traumatismo. Se le pueda al cliente cumplir a satisfacción con el pedido en tiempo y en calidad. En el otro 50% se encuentran las siete referencias restantes de las 10 referencias seleccionadas con mayor cantidad a pedir según el histórico analizado; de las cuales la referencia 2222495 representa la menor participación en la frecuencia con un 5%.

A continuación se presenta el diagrama de la propuesta de aprovisionamiento sugerida a la Empresa:

**Diagrama de Bloques del Ciclo de Aprovisionamiento Propuesto**

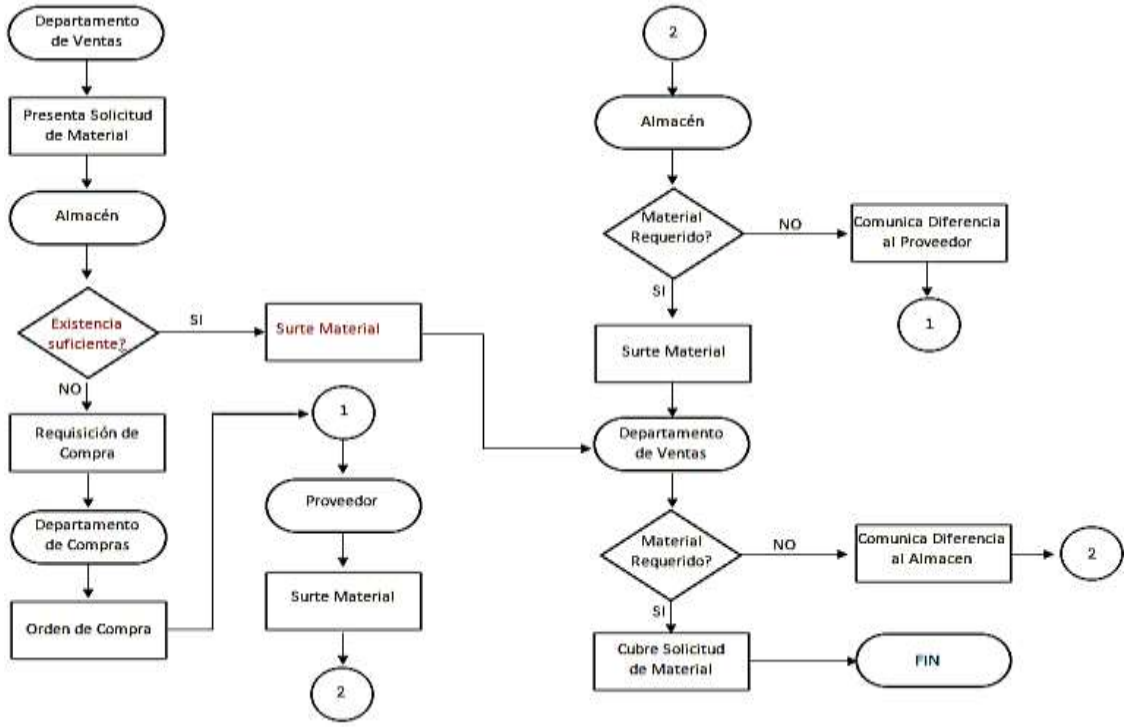

Figura 5 Diagrama de Bloques propuesto del ciclo de aprovisionamiento.

# Capítulo 11

## Socialización de la Propuesta ante las Directivas de Almacén Proveindustria Ltda.

En reunión de comité conformado por las Directivas de Almacén Proveindustria Ltda., se da a conocer y se entrega la presente propuesta para que sea conocida, evaluada y analizada. Junto con la propuesta se entregan una serie de recomendaciones para que la aplicación de la Alternativa seleccionada tenga el éxito esperado, entre las cuales se destacan la implementación de programas de sensibilización, capacitación y seguimiento.

# Capítulo 12

## Conclusiones

Almacén Proveindustria Ltda., no tiene riesgo si la demanda de un material supera el proyectado, esto se debe a que la empresa cuenta con un contrato de anticipación de demanda No. MA-0031007 cuyo objeto es: "COMPRA DE MATERIALES DE FERRERIA PARA LAS AREAS DE INFLUENCIA DE ECOPETROL S.A. EN EL MAGDALENA MEDIO, CON DOS OPCIONES DE PRÓRROGA CADA UNA DE UN AÑO, ES DECIR 365 DIAS CALENDARIO", y en este documento se establecen los plazos de entrega del material. La provisión es realizada para entregar a satisfacción en menos tiempo del indicado y apoyar a la empresa contratante si requiere entregas anticipadas, que de acuerdo a lo informado por la empresa se presentan con frecuencia.

En los cálculos realizados se observa el movimiento y requerimiento de cada una de las referencias trabajadas en el almacén de la empresa, y cuáles son las que más movimiento tienen. De las diez referencias seleccionadas con mayor movimiento, se les sugiere un stock mínimo, un stock máximo y qué cantidad se debe solicitar en cada una de ellas para que a futuro no presenten inconvenientes cuando sean requeridas por la empresa.

Almacén Proveindustria Ltda. no debe permanecer ajena ante una buena gestión en su logística, especialmente en el área de aprovisionamiento. Al desarrollar procesos logísticos de forma eficiente y eficaz, como la alternativa de solución que se les presenta en este ABP, se lograría disminuir el grado de insatisfacción del cliente en términos de calidad, tiempo, lugar, costo y valores agregados, al mismo tiempo que se optimizan los recursos de la empresa.

Es indispensable que Almacén Proveindustria Ltda revise constantemente sus procesos, pues esto les permite reconocer necesidades de cambios que minimicen sus costos y aumenten su ventaja competitiva, proporcionándoles igualmente visión y herramientas frente a un mercado cambiante y frente a las a nuevas tecnologías.

Almacén Proveindustria Ltda., dispone del recurso humano y económico para destacarse en el mercado del sector ferretero, y en mayor parte demuestra una actitud positiva ante los cambios, sin embargo, es vital que se pongan en marcha estrategias para mejorar su proceso de aprovisionamiento, asegurando la fidelización de clientes.

Todos los miembros de la empresa deben estar familiarizados con todos los procesos al igual que las metas corporativas, de esta manera el flujo interior de información no presentará falencias, podrá ofrecer al cliente una respuesta unificada ante sus requerimientos, y los esfuerzos se enfocaran en los mismos objetivos.

# Capítulo 13

## Recomendaciones

Establecer una política de stock en la que se tenga en cuenta los productos de mayor rotación entre los clientes, con lo que se podría ofrecer una respuesta inmediata a los requerimientos asociados a dichos productos, así como se daría mayor aprovechamiento al espacio físico disponible y disminuirían costos por repetidos procesos de compra.

Fijar un acuerdo corporativo con un distribuidores de material a fin de establecer métodos de trabajo regulares para el suministro, además de mecanismos de coordinación de respuesta a imprevistos y emergencias.

Crear un canal de comunicación con los clientes en el que se pueda revisar apreciaciones del servicio recibido y proyección de necesidades y pedidos. De la misma forma, adelantar acercamientos con los proveedores para el posible pacto o renegociación de convenios de precios, mejores tiempos de entrega y disponibilidad de materiales.

Si se desea cumplir con el nivel de servicio al cliente planteado en la meta de la empresa con la generación de la solución, es importante que se siga la siguiente política encontrada: mantener un stock de seguridad promedio de 16 unidades para el 70% de los 280 referencia, con un punto máximo de stock de 122 a 732 unidades dependiendo del tipo de referencia que se quiere almacenar. Por último, se debe realizar pedido en la compañía cuando las mercancías alcancen de 17 a 100 unidades en inventario, recalcando que depende del tipo de referencia, estos valores se dan debido a que en los histogramas

presentados, en el caso del punto de pedido toman aproximadamente el 93% de las 280 referencias.
